DETAILED ACTION

The prior art rejection over Gardano and DE 351 are withdrawn since these references fail to teach or suggest the hydrogenation of fluorinated compounds, as required by the claims.

The following are new grounds of rejection, necessitated by Applicant's amendments.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 27-34, 90 and 92 are rejected under 35 U.S.C. 102(b) as being anticipated by GB 212066 (GB 666).

GB 666 teaches that perhalogenated terephthalonitriles are converted to the corresponding diamine by hydrogenation in the presence of a hydrogenation catalyst under acid conditions, see abstract. The catalyst can be palladium on charcoal, see page 1, line 28. Water is present, see abstract.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 89 and 91 are rejected under 35 U.S.C. 103(a) as being unpatentable over GB 212066 (GB 666) in view of "Hydrofluorocarbons" in Kirk-Othmer Encyclopedia of Chemical Technology, pp. 714-729, Copyright © 2001 by John Wiley & Sons, Inc. (Kirk-Othmer).

GB fails to explicitly teach the specific reaction set forth in claim 89. However, those of ordinary skill would have been motivated to modify the disclosure of GB 666 to include the specific reagent in order to provide the desired compound, such as 1,1,1,2,3,4,4,5,5,5-Decafluoropentane (see reaction of olefinic compound (reaction 18) p.724 of Kirk-Othmer), or a solvent such as heptafluoropropane (see page 726 of Kirk-Othmer). Therefore, GB 666 and Kirk Othmer render the rejected claims prima facie obvious since these references teach or suggest the elements of the rejected claims with a reasonable expectation of success.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 1621

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
